

Your Hard Drive Isn't Orange... Why Should Your Hard Drive Icon Be?

Introducing the brand new OWC Hard Drive Icons!

Already a desktop sensation with the OWC Tech Department, these hard drive icons are just the thing the discriminating user needs to accentuate their **OWC Hard Drive**. No more trying to remember which icon is for your OWC Hard Drive and which is the icon for that "Amazing Delete-O-Matic" shareware app you downloaded last week but haven't yet thrown away. Simply copy and paste the OWC Hard Drive icon over your drive's generic one, and you'll know for sure.

Each OWC Hard Drive Icon:

- is available in two versions - An "Aqua" style to blend in with the the default OS X feel and an "Isometric" style for those who enjoy that whole "Retro/OS 9" look.
- is lovingly hand-crafted out of 98% recycled pixels from original OWC promotional photos!
- adds aesthetic and ergonomic value to your computing experience for seconds, if not minutes!
- has the "Nifty Blue Glow" open state to impress the easily impressed!
- gives off a fresh pine scent!*

**fresh pine scent may require additional hardware*

So if you are the proud owner of an **OWC Mercury Express, OWC Mercury On-The-Go, OWC Mercury Elite, OWC Mercury Elite Aluminum, OWC Mercury Elite Aluminum Dual** or **OWC Neptune** hard drive, download the OWC Hard Drive Icon set today**. If you *don't* have one of those drives, I suppose you could paste it on one of those other drives and *pretend* you have one. Bu, you might as well pop on over to www.macsales.com and buy one for real... or a processor upgrade... or memory... or anything, really... we're not too picky about what you buy, as long as it's from us.

***we realize that if you're reading this, you most likely already downloaded it, but you get the idea...*

Icons and images ©2005 Other World Computing, Inc. Use of these icons is done at the user's own risk. OWC assumes no responsibility for any damage or data loss resulting from the use of these icons, even if you feed irreplaceable files to the Delete-O-Matic. Oh, and don't try and blame us for that whole Ozone Layer thing, either... totally not our fault. Remember when that comet hit Jupiter a few years back? We had nothing to do with it. Same thing goes for all your natural disasters. Just enjoy the free icons and don't blame us if something somehow goes wrong, that's all we ask.
